software

DocQueue IS AN EASY-TO-USE APPLICATION FOR PRINT QUEUE MANAGEMENT OF NETWORK-ATTACHED PRINTERS

Advanced Print Queue Management

DocQueue provides advanced management of print queues. It's easy to operate with point-and-click management of print projects. DocQueue is scalable for print requirements ranging from a single printer to mid-sized CRDs.

Print Job and Queue Management

DocQueue allows the viewing of one or multiple files at the same time for approval and release, as well as previewing print jobs and properties. You can name print jobs for easier identification and tracking, and add banner and trailer pages to more easily identify jobs.

DocQueue improves document output by organizing and managing printing with separate spoolers for each output device. DocQueue allows the grouping, prioritization, tracking, and reprinting of print jobs.

It can control and process documents in both automatic and operator modes. Automatic mode is often used for batch document processing while operator mode is for users that want to closely manage jobs and to hold, view, and manually release the jobs via drag and drop.

DocQueue is built upon a multi-threaded architecture that allows for fast processing of multiple print jobs so that you don't experience print backlog.

Printer and MFD Monitoring with Operator Notifications.

DocQueue monitors printers and multifunction devices (MFDs) on a real-time basis and notifies operators of their status. Quickly validate that a printer is ready or printing. When printer problems do occur, DocQueue alerts you to print conditions such as low toner, door open, printer offline, user intervention, tray empty, and many more.

DocQueue's client/server architecture provides the ability for remote control and messaging over the system. Detailed logs track document processing and help streamline potential bottlenecks.

FEATURES

- Client- Server architecture
- Intuitive Windows-based print management interface
- See alerts and printer level errors via SNMP printer-status monitoring
- Manage any type of print file in pass-through mode
- Reprint any type of print file as a whole
- Override finishing settings on individual PS and PDF files
- Reprint a subset of pages for PS and PDF files
- Convert PS and PDF files to other print formats you have a Windows print driver for (PCL, AFP, etc.)
- Route printer jobs to multiple output locations simultaneously (Printer, File, Achieving System, etc.)
- Automatically retain copies of print jobs for a set number of days before purging
- Auto-hold large jobs for operator release
- Re-order print jobs in a print queue
- Drag print jobs from one queue to another
- Add banner pages to print jobs
- Manage all print queues in one place

UTILIZE DocQueue TO ITS FULL POTENTIAL WITH PROFESSIONAL SERVICES FROM CANON SOLUTIONS AMERICA.

Whether your business is large or small, remaining competitive in the global economy means you need to concentrate on what makes you successful—your core business. When selecting and implementing new technology, a highly skilled technical team makes the difference for a successful deployment.

Canon Solutions America has the team of experts you need to help you acquire the right technology, solutions, and services for your organization. From pre-sales analysis to post-sales support, our team of technical professionals draws upon decades of technical expertise and real-world experience to ensure you obtain the maximum benefit from your technology investment.
